Re : Ocean Adventure Commendation Request

Dear Mr. San Antonio,

Greetings from Ocean Adventure in Subic Bay, Philippines!

Ocean Adventure is the first and only open-water marine theme park in Southeast Asia. It is envisioned to foster conservation through the exhibition of marine life in a natural setting. We are not just to entertain but to educate everyone, working together to save animals and environment at the same time. Our main goal is to enlighten children of all ages on how they, too can help to protect our environment.

We will continue to Entertain, Educate and Empower students by supporting the K to 12 Basis Education through its educational and entertaining animal show. In line with this program we would like to re-introduce The Environmental Education Center (EEC Program) offers students a wide range of educational activities. We have program that are perfect to integrate with a variety of subject including Biology, Environmental Science, Psychology and Math. Each of these has been scrutinized, and great attention has been placed on identifying learning outcomes and alignment of these to Science practice for Biology and Environmental studies. The natural environment here in Subic Bay faces the same challenges, to varying degrees, that other rainforests and coral reefs face throughout the world. It's a natural laboratory where students can embrace the programs.

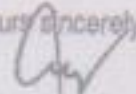

Discover one of a kind artwork upon entering the Ocean Heart Gallery. The gallery has already drawn the attention of many schools and art enthusiasts expecting to be entertained and informed about the specific style or of painting. Moreover, it hopes to expand on its collection in the future to include more types of perspective art. Ocean Adventure has added a fun and colorful dimension to otharwise drab park areas before.

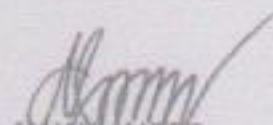

We are seeking commendation from your good office for Ocean Adventure to be the venue for educational field trips of both public and private schools.

With your continuous support to our endeavor in educating, enlightening and empowering our youth, that we could make a difference in preserving our environment.

Thank you and we're looking forward for your positive response.

Yours sincerely,
